

# Earth Science Software Reuse Enablement Systems

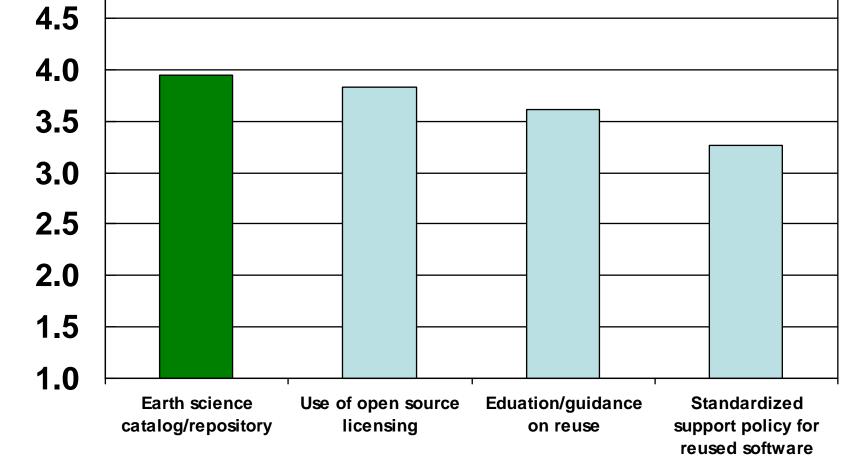

Fall 2005 AGU Poster Session IN23B-1220

## Some Important Survey Results

Factors preventing reuse of existing assets

#### Importance of factors to increase the level of reuse

### Recommendations

- NASA should establish an effective mechanism for dissemination of reusable assets within the Earth science community.
- Based on the conclusions of the technology evaluation, NASA should implement a reuse enablement system.

#### Conclusions

- A new catalog/repository system is needed to encourage and better enable software reuse within the community of Earth science software developers.
- Some collaboration with existing systems may be possible, but existing systems alone cannot meet the needs of this community.
- An architecture study must be performed to determine the most expeditious and cost-effective solution for such a system.

# Reuse Enablement System Requirements

#### Screenshots of Some of the Sites Reviewed

4 Ares Galaxy
5 7-Zip
6 Compiere ERP + CRM

GCMD – Provides many data sets in many areas of Earth science

NASA Open Source Sites – Good at promoting NASA-produced open source software

Sourceforge – A general software repository that provides software in many different fields

However, none of the existing sites fulfill the role of a software repository for the Earth science community of software developers.
